21,530 mi or 34,650 km

Earth’s Circumference
24,900 mi or 40,100 km
Melbourne, Australia
Alice Springs
Yulara, the Red Centre
Kulpi Mutitjulu

This is the family cave. For many generations, Anangu families camped here. The men would hunt for kuka (meat) and the women and children would collect mai (bush foods). The food would be brought back here to share.

Stories on stone
The colours come from a variety of materials. Tutu (red ochre) and antam (yellow ochre) are iron-stained clays that were very valuable and traded across the land. Burnt kurkur (desert oak) provides purku (black charcoal), and tjungu (white ash).
The dry materials are placed on a flat stone, crushed and mixed with kopi (water).

Mutitjulu cave
At night around the campfire, generations of our people told stories, teaching the children about this place and painting on the rock. Today these stories are still kept and handed down to the children.
Paddy Uluru remembers painting here as a young boy around the 1930s.

This is a good place to stay and rest. We were always travelling, travelling, travelling, it is a good place to tell stories, to learn about this country. This is the Tjukura country.
Cairns

Port Douglas to the Great Barrier Reef
Kuranda
Hot Air Balloon – Atherton Tablelands
Harbour Bridge

Bridge Climbing: Ascend 134 metres above sea level in 252.5 metres horizontal distance, with no barriers, no sense of time, no going back, just onward, just upward, the ferries below the size of matchboxes, the Opera House shrinking away across the harbour. 1,337 stairs. 1 1/2 football fields above the water, and a breath taking view of Sydney, surrounding suburbs and all the way to the mountains. My heart pounds, my legs shake, I feel every breath...

I climbed it!
Sydney Aquarium
